

YOU CAN HELP STOP THE CYCLE OF DRUG ADDICTION!

1. Open vial

2. Add warm tap water until vial is 2/3rds full

3. Add DisposeRx powder & shake for 30 seconds, contents solidify in <10 minutes

Formulated to be used with tablets, capsules, powders, patches, or liquids.

Why DisposeRx: Leftover and expired prescription drugs in your medicine cabinet can lead to abuse, accidental poisonings and overdoses.

DisposeRx: Focuses on removing the dangers of accidental poisoning and prescription drug diversion, with empowering solutions.

How DisposeRx Works: We offer a simple, environmentally safe at-home waste disposal solution, which physically and chemically sequesters prescription drugs making them inert and unavailable for misuse. Our blend, when added to the leftover medications in water, forms a gel which permanently captures the prescription drugs which can then be thrown in the household trash.

WE are dedicated to environmentally safe solutions aiming to prevent the cycle of overdoses and death.

DisposeRxTM

CREATE A HEALTHY HOME!

The cycle of addiction very often begins in the home medicine cabinet. **YOU** can make a difference with our in-home solution.

Why is this message important? Our nation is fighting a horrifying epidemic. There is an **URGENT** need to curb the chain of illicit opioid access. Together, we can rid our homes of unused and expired medications that often lead to illicit use and addiction.

How do proactive solutions play a role in breaking the chain of illicit prescription drug access? We offer a home based solution that encourages positive habit-forming disposing results that will break the cycle of the temptation to misuse leftover or expired medication.

What does DisposeRx offer? We have developed a blend of cross-linking polymers that both physically and chemically sequester medications in a biodegradable solid. We are raising the bar on today's complicated, inefficient, unreliable and inconvenient consumer disposal methods, bringing a painless consumer driven answer to a complex question. *"What do I do with my left over medications?"*

DisposeRx™

PREFERRED DESTRUCTION STEPS:

Step 1: Sequester all your unused or expired medications by removing the child resistant cap and confirm that the prescription vial is no more than 1/3 full of pills, capsules and or tablets (this will ensure maximum destruction).

Once activated, medication will be safe from diversion or illicit use.

Step 2: Add water until the prescription vial is about half full.

Step 3: Simply add the **DisposeRx** powder, secure the child resistant cap and shake for ~30 sec or until gel is activated. Then simply discard in your household waste.

Discard alternative: Collect all your sequestered medication vials and head to your drop off locations for incineration.
