

DisposeRx is the industry Gold Standard and leader in medication disposal. Our focus is to stop medication diversion where it starts, in our home medicine cabinet. By doing this simple task we can all have a healthier and safer home environment.

DisposeRx is dedicated to stopping the cycle of addiction and misuse of leftover medications. We have developed a proprietary blend of cross-linking polymers that permanently captures prescription drugs in a non-divertible and biodegradable gel. To date, there are no other drug disposal products in the marketplace that will permanently sequester prescription or over-the-counter medications.

At **DisposeRx**, we believe that a simple to use and environmentally safe drug disposal solution could have an enormous effect in diminishing the public safety threat of leftover or unwanted medications. By empowering patients and families with education and safe disposal solutions such as DisposeRx, we feel as a community we will begin to adopt improved prescription drug management skills, thus breaking the chain of illicit access, addiction, overdose and death.

DisposeRx

135 West Illinois Ave, Suite 1
Southern Pines NC, 28387

Manufactured in the USA by DisposeRx, Inc.

About: DisposeRx is an anti-medication misuse company which has developed a site-of-use drug disposal solution for unused, unwanted, expired or off-therapy medications. Our technology solution offers an effective, convenient and inexpensive method for permanent drug disposal, both chemically and physically sequestering medications into a viscous gel. Our Gold Standard disposal technology ultimately empowers users to safely, freely and comfortably dispose of medications, thus stopping the cycle of addiction.

What can I do with my unused and/or expired medications?

DisposeRxTM

A safe environmental solution for the disposal of Rx medications

STOP ADDICTION

It begins in your home medicine cabinet!

Visit us at:
www.DisposeRx.com

It is as simple as asking your pharmacist for a packet of **DisposeRx** to take home with your prescription.

Do you know that:

- 92% of patients do not finish their painkiller prescriptions.
- Less than 10% of people with leftover medications dispose of them properly.
- 25% of the American households have unused, unwanted and leftover opioids.
- Unused and expired medications are a significant source of both safety and environmental problems.
- Improper disposal of drugs has contributed to the opioid epidemic, accidental poisonings, drug overdoses, deaths and the pollution of our nations pure drinking water.

How does it work?

Formulated to be compliant with evolving government regulated standards.

To be used with tablets, capsules, powders, patches and liquids.

1. Open vial

2. Add warm tap water until vial is 2/3rds full

3. Add DisposeRx powder & shake for 30 seconds, contents solidify in <10 minutes

Help create a healthy home

The cycle of addiction often times starts at the home medicine cabinet. You can make a difference by properly disposing of your unused and expired medications.

Solving the problem of safe drug disposal!

“Help create a happy home and a healthy environment with a safe proactive medication disposal solution.”

– Dr. John W. Holaday
