

DisposeRx[®]

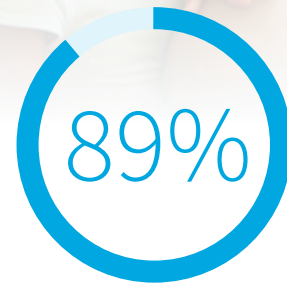

Solving the problem of drug disposal

*We make every day
a take-back day.*

What if you could save
a life for less than \$2?

You can.

DisposeRx is the tool of change to
stop accidental poisonings, and the
misuse of leftover drugs.

*of consumers are looking for
a safe and convenient way
to dispose of unwanted
medications.¹*

*DisposeRx is the clear choice for convenient and environmentally-friendly disposal of
your unused prescription medications.*

Why DisposeRx

Fight the misuse of leftover prescription medication and accidental poisonings. Our system is not only convenient, effective and safe, but inexpensive and **can be used IMMEDIATELY and without leaving your home.**

How

DisposeRx is a means for immediate drug disposal. Simply add water and one DisposeRx packet to your unused medication in its vial, then throw it away in your household trash.

What

Current drug disposal methods are outdated and ineffective.

DisposeRx was created for site-of-use application satisfying the request of consumers to be able to dispose of their medication in a simple and convenient way.

“In-home disposal allows consumers to avoid driving across town to drug take-back drop off centers; an important consideration for immobile senior citizens and other residents seeking to avoid congested traffic.”²

OUR SOLUTION PROVIDES SAFE, EASY AND CONVENIENT AT-HOME DISPOSAL

DRx has undergone extensive, independent third-party testing which includes:

- Toxicity Characteristic Leaching Procedure, Volatile Organics Compounds and RCRA Testing
- Retrievability Testing
- CCR Title 22 Fathead Minnow Hazardous Waste Screen Bioassay
- 96-Hour Static Washington State Hazardous Waste Regulation Bioassay
- Pill Degradation Study
- Comparison Testing
- Extractability Study

“Parents should keep their medications locked away and dispose of any leftover pills promptly and safely.”³

What is the true cost of letting unused medications linger in the medicine cabinet?

12%

of children live with a drug or alcohol addicted parent.

Education is critical to proper drug disposal.

Post-operative prescription opioids often go unused, unlocked, and undisposed.⁴
